

Sinhué Siordia Millán

Data Scientist, Machine Learning Operations (MLOPs) Engineer & MS. Bioengineering & Intelligent Computing

PORTFOLIO

sinhuesiordia.com

Nationality: Mexican
Address 1: Culiacán, Sinaloa, México.
Address 2: Guadalajara, Jal, México.
Cellphone: (667) 130-26-28
Email: carpediem.sinhue@gmail.com

Valid US B1/B2 Visa
Languages: English B2

GitHub: [SanehetSiordia](#)

SUMMARY:

Data Scientist and MLOps Engineer proficient to design and implement end-to-end Machine Learning lifecycles using Databricks, MLflow, Docker, and FastAPI. Strong leadership background as a Tech Lead, managing Agile teams and enforcing CI/CD best practices within cloud-native environments (GCP/Azure). Passionate about leveraging data to drive business value, from optimizing financial service workflows to developing deep learning solutions in healthcare. Certified in MLOps, Data Engineering, and Generative AI with a master degree in Bioengineering and Intelligent Computing with 8+ years of research and development expertise.

WORK EXPERIENCE:

Data Scientist and MLOps Researcher, Culiacán, SIN.

(2026 - Present)

- Design and build a Job Workflow that extract, transform, and load (ETL) the real-life dataset about bank loan renewal projects saved in a delta lake storage, using an automatic pipeline with Azure Databricks Platform.
- Project file:** [Renovacion Prestamo Databricks](#)
- Develop, implement and integrate the bank loan renewal project with a MLOPs end-to-end workflow with docker, MLflow models and experiment tracking, unitary tests, fastapi framework, automatic CI/CD with model deploy in Google Cloud Run.
 - Project file:** [Renovacion Prestamo MLOPs](#)
- Develop and implement machine learning models to make predictions about identifying bank customers most likely to renew a loan, analyzing real-life datasets to extract meaningful insights and identify patterns, trends, and correlations with the main objective of optimizing sales conversion campaigns and reducing advertising contact costs through accurate predictive modeling.
 - Project file:** [Renovacion Prestamo ML](#)

Tech Lead, "Coppel S.A. de C.V", Culiacán, SIN.

(2024- 2026)

- Design, manage and lead developer strategies to achieve the goal.
- Lead Scrum Events alongside the Scrum Master, optimizing team planning and delivery processes.
- Mentored engineering teams and enforced Clean Code standards, peer code reviews, and robust CI/CD pipelines on Azure DevSecOps for scalable software and data solutions.
- Continuous value delivery using tools from scrum and agile methodologies.
- Implement reviews of CI/CD pipelines on Azure DevSecOps for software deployments on on-premises Red Hat Linux servers and Google Cloud Platform (GCP).
- Redact technical documentation solutions and production installations for efficient knowledge transfer.
- Configure and maintain reliable development and testing server environments.
- Design and configure API proxies with Google Apigee platform.

Software Architect, "Coppel S.A. de C.V", Culiacán, SIN.

(2023 - 2024)

- Design UML (Unified Modeling Language) diagrams for architecture solutions.
- Impacts estimation for new software improvements and developments.
- Ensuring code scalability and maintainability.

Quality Engineer, "Continental Automotive S.A. de C.V", Tlaquepaque, JAL.

(2018 - 2020)

- Application of methodologies for client problem solving.
- Lean Six Sigma methodologies implementation for operative operations optimization.
- Define and implement quality strategies and continual improvement processes.

PROFESSIONAL SKILLS:

- Implement machine learning models to perform predictions and classifications.
- Design and develop End-to-End MLOPs implementation in Cloud (AWS, GCP).
- Create automated ETL pipelines with Databricks Jobs Workflows using the Medallion architecture, Delta Lake storage, and Unity Catalog for governance and security.
- Design and configure API proxies using Google Apigee platform.
- Docker developer and kubernetes maintainer on redhat and google cloud infrastructure.
- Use of continuous integration and deployment (CI/CD) with Azure DevOps and Github Actions.
- Design, create and control databases with MySQL, PostgreSQL and SQL Server.
- Design UML diagrams for architecture solutions in projects.
- Use of Scrum and Agile project management methodologies.
- Use and management of "Lean Six Sigma" tools.

SOFT SKILLS:

- Ability to adapt to circumstances.
- Good disposition and performance at work.
- Ability to design and implement control systems.
- Ability to work as a team, responsible and committed.
- Leadership capacity, work under pressure and personnel management.
- Autonomy for analysis and implementation of continuous improvement.

TECHNICAL SKILLS:

Programming Languages

- Python
- SQL
- Java
- C++
- C#

Software, Frameworks & Libraries

- Machine Learning: Scikit-learn, Keras
- Deep Learning: TensorFlow, Transformers, LLMs
- NLP: NLTK, Word2vec, GloVe, FastText
- Data Analysis: Pandas, Matplotlib, Seaborn

Big Data & Data Engineering

- Frameworks: PySpark, Spark SQL, Delta Lake (ACID, Time Travel, Vacuum)
- Databases: PostgreSQL, MySQL

MLOps, Cloud & Deployment

- MLOps & Workflows: MLflow, Apache Airflow, Lakeflow Jobs, Data Version Control (DVC), Evidently AI
- Model Deployment & DevOps: Docker, FastAPI, RESTful APIs
- Cloud & Infrastructure: GCP, AWS S3, Red Hat.

CERTIFICATIONS AND RECOGNITIONS:

- Data Engineering and AI with Databricks. (SDIDIA-20261535) (2026)
- MLOps Specialization: From Model to Production Environment. (SDMLO-20260131) (2026)
- Specialization in Data Science and Generative AI with Python. (SDIAG-20260816) (2026)
- Certificate in Lean Six Sigma Black Belt by Lean Six Sigma Institute. (BB-D01120) (2016)

ACADEMIC EDUCATION AND PROJECTS:

University of Guadalajara.

Master's degree in Bioengineering and Intelligent Computing. (2020 - 2022)

Automatic prediction of the clinical diagnosis and identification of clinical laboratories variables related to pulmonary embolism or pneumonia from analyzing electronic health records from Mexican hospitals with machine learning algorithms (**Decision Trees, Random Forest, Support Vector Machine, Neural Networks, Adaboost and BiLSTM**) and **natural language processing (NLP)**. The information was extracted and stored from PDFs formats using Python and MySQL Database.

- **Project files:** [AI EHR MX](#)
- **Project Article:** [10.3390/diagnostics12102536](#)
- First Place of Student Contest Postgraduate Level from "44° National Congress of Biomedical Engineering" (2021) - **Project Article DOE:** [10.24254/CNIB.21.56](#)

Institute Technology of Culiacan.

Bachelor in Mechatronics Engineering (Professional License: 9803001).

(2010 - 2015)
